

MUZAMMIL GULAB NADAF

Senior Application Support Engineer | L2/L3 Production Support | Incident & Problem Management | Azure DevOps | Enterprise Platform Operations

8.6+ Years Owning L2/L3 Support for an Enterprise UK Omni-Channel Retail Platform | Open to Remote, Hybrid & Global Relocation
India (Remote) | +91 93737 86648 | nadafmuzammil@gmail.com | linkedin.com/in/muzammilnada

PROFESSIONAL SUMMARY

Senior Application Support Engineer with 8.6+ years of experience in enterprise production support, incident management, release engineering, and cloud-based application support. Currently working as a Technical Lead at Incedo, supporting L2/L3 production support activities for cloud-based enterprise applications in the Life Sciences domain, contributing to incident resolution, root cause analysis (RCA), release coordination, production monitoring, and cross-functional collaboration to maintain application stability and SLA commitments. Built this foundation over 8+ years strengthening production reliability for an enterprise C#/.NET Omni-Channel Retail platform serving 50+ stores and millions of annual customer transactions for a UK-based international client — personally resolving 3,000+ production incidents while helping sustain 99%+ platform availability through Splunk log analysis and proactive monitoring, and coordinating release delivery across 100+ production deployments through Azure DevOps Build and Release Pipelines. Combines steady incident response with disciplined release execution and strong stakeholder communication to keep enterprise platforms stable and deliver successful production outcomes.

CORE COMPETENCIES

Production Support Leadership (L2/L3) • Incident, Problem & Change Management • Major Incident Response • Release Coordination & Deployment Validation • Azure DevOps (Build & Release Pipelines) • Root Cause Analysis • Cloud-Based Enterprise Application Support • Splunk Monitoring & Observability • SQL Server Troubleshooting • REST & SOAP API Validation • SLA Management • Disaster Recovery & Business Continuity • Stakeholder Communication • ServiceNow & ITIL Service Management • IIS & Windows Server Administration • Knowledge Management & Documentation • GDPR Compliance • Enterprise UK Omni-Channel Retail

KEY ACHIEVEMENTS

- **Resolved production incidents at scale** — personally diagnosed and resolved 3,000+ production incidents and led 50+ root cause analysis investigations in ServiceNow, helping sustain 99%+ availability for a retail platform processing millions of annual customer transactions.
- **Delivered consistent release quality** — coordinated 100+ production releases and 100+ production changes through Azure DevOps Release Pipelines, executing smoke testing, functional validation, and post-deployment verification with minimal disruption to live retail operations.
- **Led an enterprise infrastructure migration** — served as sole point of contact for a Windows Server 2008-to-2019 migration across multiple business-critical applications, leading impact analysis, cutover planning, and post-migration validation with zero major disruption.
- **Strengthened disaster recovery readiness** — led annual DR and failover testing for critical retail applications, producing audit-ready evidence and documentation for compliance reviews.
- **Progressed through increasing ownership** — advanced from Management Trainee to Senior Software Engineer within the same international retail account over 8.6+ years, taking on greater responsibility for production support and release coordination.
- **Supported GDPR compliance at scale** — designed GDPR-compliant audit tables and SQL data structures, supporting 200+ data subject requests for a major UK retail platform.

PROFESSIONAL EXPERIENCE

Technical Lead — Incedo Inc.

Jul 2026 – Present | Life Sciences Domain | Cloud-Based Enterprise Applications

- Supporting L2/L3 production support activities for cloud-based enterprise applications in the Life Sciences domain.
- Participating in incident triage, root cause analysis (RCA), and application stability initiatives while gaining knowledge of production processes and SLA-driven support.
- Collaborating with development, QA, infrastructure, and business stakeholders using Azure DevOps to support application releases and production maintenance.
- Supporting SQL Server, REST APIs, production monitoring, release validation, and operational support for cloud-hosted enterprise applications.
- Contributing to knowledge sharing, technical documentation, operational best practices, and continuous service improvement.

Senior Software Engineer — Zensar Technologies

Dec 2017 – Jul 2026 | 8.6+ Years | Promoted to Senior Software Engineer: July 2021 | Pune, India | Enterprise UK Omni-Channel Retail Platform (50+ Stores) | Career path: Management Trainee → Junior Software Engineer → Software Engineer → Senior Software Engineer

L2/L3 Application Support & Incident Management

- Resolved 3,000+ production incidents across Production, UAT, SIT, QA, and Development for a C#/.NET retail platform processing millions of customer transactions, using Splunk log analysis to isolate root cause and restore service within SLA.
- Coordinated the full incident lifecycle — triage, problem management, change management, and stakeholder communication — working closely across distributed development, QA, infrastructure, database, and middleware teams.
- Strengthened platform visibility by running daily application and infrastructure health checks and building weekly, monthly, quarterly, and annual support reports used by management to track platform stability.
- Supported the UK retail platform through peak trading periods including Black Friday and Christmas, participating in 24x7 on-call and major incident response to restore service during critical outages.

Release Management & Azure DevOps

- Coordinated 100+ production releases and 100+ production changes end-to-end — scheduling, rollback planning, and post-deployment verification — working closely with Release Management, development, QA, infrastructure, and business teams.
- Created application builds and managed Azure DevOps Build Pipelines, then coordinated Release Pipelines to promote approved builds across Development, QA, SIT, UAT, and Production using Puppet and Hiera for deployment automation and configuration management.
- Validated every deployment through smoke testing, deployment verification, and production verification across all environments, protecting release quality on a live enterprise retail platform.

Manual Testing & Release Validation

- Executed functional and smoke testing on every production release, validating application behavior across Dev, QA, SIT, UAT, and Production before sign-off.
- Delivered release, deployment, and environment validation for 100+ releases, confirming application health and data integrity immediately after each deployment.
- Validated SQL data changes and REST/SOAP API request-response payloads using SoapUI to confirm integration behavior between retail applications and downstream systems, reproducing and verifying defects prior to closure.
- Improved release consistency by creating validation checklists and documenting verification steps, giving QA and release teams a repeatable, auditable sign-off process.

Database Support & API Integration

- Resolved data issues through SQL queries, stored procedures, and scripts for retail data investigations, performance troubleshooting, and GDPR audit and compliance requests.
- Built and validated SSIS package deployments across multiple environments, including data integration checks and production data validation during releases.
- Administered IIS for enterprise .NET applications across Production and Non-Production — application pools, site configuration, SSL certificates, and bindings — tuning performance to hold response times within target; used Salesforce Marketing Cloud with SQL-generated Data Extensions for large-scale customer communication campaigns.

Infrastructure, Migration, Documentation & Disaster Recovery Leadership

- Led a Windows Server 2008-to-2019 migration as sole point of contact across multiple business-critical applications — ran stakeholder meetings and impact assessments, planned the cutover, wrote migration and validation documentation, and stayed on as owner for post-migration monitoring.
- Planned and ran annual DR exercises for critical retail applications — failover testing, recovery validation, and reporting — producing audit evidence and management presentations.
- Authored and maintained knowledge base articles, operational runbooks, release notes, and technical documentation that reduced incident resolution time and accelerated new team-member onboarding, serving as the go-to contact for audit and compliance reviews.
- Delivered customer order consolidation functionality in C#/.NET — merging multiple customer email accounts into one primary account — and implemented GDPR audit tables and supporting database objects for compliance reporting.

TECHNICAL SKILLS

- **Application Support:** L2/L3 Incident, Problem & Change Management | Major Incident Management | ServiceNow | Root Cause Analysis | Production Monitoring | SLA Management | ITIL
- **DevOps & Release Management:** Azure DevOps | Build & Release Pipelines | Deployment Coordination (Dev/QA/SIT/UAT/Prod) | Puppet | Hiera | Release Validation | Rollback Planning
- **Manual Testing:** Functional & Smoke Testing | Release & Deployment Validation | Environment Validation | SQL Data Validation | API Validation (SoapUI) | Defect Reproduction & Verification
- **Microsoft Technologies:** C# | .NET Framework | ASP.NET MVC | IIS Administration | Windows Server 2008–2019
- **Databases:** MS SQL Server | MySQL | Stored Procedures | SSIS | SQL Troubleshooting & Data Validation
- **API & Integration:** REST & SOAP APIs | HTTP/HTTPS | SoapUI | Integration Troubleshooting | IBM MQ | SFTP/SMTP | Salesforce Marketing Cloud
- **Monitoring & Observability:** Splunk | Production Log Analysis | Application Health Checks | Production Health Monitoring | Incident Investigation | Application & Infrastructure Monitoring
- **Cloud & Infrastructure:** Cloud-Based Enterprise Applications | Windows Server Administration | IIS | SSL Certificate Management | Capacity Planning | DR & Business Continuity
- **Documentation & Collaboration:** Knowledge Base Articles | Runbooks | Release Notes | ServiceNow | JIRA | Confluence | TFS | Agile Scrum

DOMAIN EXPERTISE

Life Sciences (Cloud-Based Enterprise Applications) • Omni-Channel Retail | Order Management Systems (OMS) | Customer Order & Account Management | E-Commerce Operations | Retail Promotions | RTC (Reduce-to-Clear) | Peak Trading, Black Friday & Christmas Trading Support | Enterprise UK Omni-Channel Retail Platform Support
